

# Requirements and Wireframes: Team Assignment 1

 Published

 Edit

This is a team assignment.

First, define a small set of high priority *user stories* corresponding to the first iteration of your project, in most cases this will cover only part of the synopsis presented in your [Revised Project Proposal assignment](#).

This subset should be sufficient for your project to be demoable, although probably not fully operational and usable. Your first demo will be due as part of the upcoming "[Implementation](#)" assignment. That is, you should demonstrate your system to your team mentor prior to submitting the Implementation assignment, which is due October 26. Note this gives you only two weeks! However, this is before the "[Unit Testing](#)" assignment, due November 9, so we do not expect your demo to be rigorously tested. (There will be additional demos later on.)

Second, expand your set of user stories into *use cases*, to cover the main steps of the basic flow and the major alternative and exceptional flows.

Third, sketch *wireframes* for each user story/use case that involves interaction between the system and a human user. Wireframes can be drawn by hand on paper/whiteboard and then scanned/photographed, or you can use a drawing program (even powerpoint). A free "minimal" wireframing tool is available at <https://wireframe.cc/> [\(https://wireframe.cc/\)](https://wireframe.cc/).

Finally, tell us which pair is responsible for what. You can change this later.

Each team should submit a single file, i.e., one member should submit. The name of your file should include your team name, and the contents of the file should also include your team name. Your file should include details about how the teaching staff can access your git repository - in which you should deposit all team assignments, not just your code. The file must include the text of your user stories and use cases directly, making clear which use case expands which user story. The corresponding wireframes may be included directly, or you can provide links to where your wireframes are posted online (note it must be possible for the teaching staff to follow these links).

**Points**10

**Submitting**a file upload

**File Types**doc, docx, pdf, txt, xls, and xlsx
