

Assignment T4: Initial Demo

✓ Published

 Edit

This is a team assignment. This assignment will be graded as 0 to max points. Scroll down for submission instructions at the end.

Demonstrate the MVP (minimum viable product) version of your project to your IA mentor. Please plan your demo in advance, and debug until it works smoothly. The demo itself only needs to be 5-10 minutes, but schedule enough time for pre-demo setup and post-demo discussion with your IA mentor.

Create a folder in your github repository containing all your team assignment submissions, including preliminary proposal, revised proposal, first iteration document and, upon completion, this initial demo submission.

Submit the following:

part 1: The date and time at which you already completed this demo, and briefly describe any challenges that arose during the demo.

part 2: A link to the github repository where your entire codebase resides. Tag which file revisions were shown in the demo.

part 3: A link to the folder in your repository that includes all your prose submissions thus far for this course.

You can discuss this assignment in this course's team_project folder on [piazza](https://piazza.com/columbia.edu/spring2020/courseworks2), (https://courseworks2.columbia.edu/courses/104335/external_tools/1456) on relevant community forums, on stackoverflow, etc. However, do not ask for anyone outside your team to participate in developing your project; this is a violation of the university's academic honesty policy.

Submission instructions: One member of your team should submit a single file (preferably pdf) with the required information for parts 1-3. Your file must contain your team name and the names/unis of all team members. You may submit repeatedly until the deadline (note that if multiple team members submit, the most recent submission will override all previous submissions by the same or different team members).

Points 10

<div><div>Demo Rubric</div><div>Criteria</div><div>If the demo did not happen yet, give zero for this assignment.</div><div>User stories demonstrated (6 points max) Look at the user stories stated in the iteration report. Take off 1 point for each user story that was not actually shown at all, up to 6 points. If there are more than three user stories written, but not actually shown, this would be 0, not -1 or -2). Take off 1 point for each user story that was shown but did not work, up to 6 points. If there are more than three user stories shown, but non-functional, this would be 0, not -1 or -2).</div><div>Github repo (2 points max) 1 point if all the file revisions included in the demo'd build/package are actually tagged, 0 if any/all not tagged. 1 point for a folder including all submissions thus far, 0 if no such folder or if any document thus far is missing.</div><div>Demo quality (2 points max) Was the demo interesting, fun, polished, etc.? Give 0, 1 or 2 points.</div></div>
