## Assignment T4: First Iteration Demo

Demonstrate the first iteration version of your service to your IA mentor. Your demo can be done via online screen sharing, e.g., on Discord, you do not need to meet in person. All team members should be (virtually) present.

Please plan your demo in advance and debug until it works smoothly. The demo itself only needs to be about 5 minutes, but schedule enough time for pre-demo setup and post-demo discussion with your IA mentor. Tag the set of file revisions that were shown in the demo.

Also arrange some way for your IA mentor to be able to "drive", preferably immediately following your demo during the same meeting. Probably the easiest way to do this is host your service on a hosting platform like Heroku or Google Cloud. Heroku is "free" and the instructor can provide Google Cloud credits. If you use Postman, it should be possible for your IA to drive from there.

Your submission for this assignment should give the date and approximate time at which you already completed this demo and a link to the github repository where your codebase resides. Yes, give us the link again: having the link right there makes github-related assignments much easier to grade. Make sure your IA mentor has collaborator access!

**Submission instructions:** One member of your team should submit text with the required information. Either type this into courseworks or upload a file.

Points 15

**Submitting** a text entry box or a file upload

File Types pdf, doc, docx, and txt

## **T4 First Iteration Demo**

You've already rated students with this rubric. Any major changes could affect their assessment results.

Criteria	Ratings	Pts
Were all team members present?  If a student has a "documented excuse" for not attending, they need to send it to me on piazza for approval.	This area will be used by the assessor to leave comments related to this criterion.	1 pts
Tagged revisions Are the files versions included in this demo tagged on github?	This area will be used by the assessor to leave comments related to this criterion.	1 pts
Did the demo run smoothly?  There should be no crashes, hangs, nonsense outputs, refusals to accept input, etc. Did they explain clearly what they were showing so you could understand?	This area will be used by the assessor to leave comments related to this criterion.	3 pts
Were you able to test drive?  This does not need to be during the demo meeting, but do not submit a grade until you were given instructions about what to do to test drive and you were able to get it to work. So if no test drive, then total score is 0.	This area will be used by the assessor to leave comments related to this criterion.	0 pts
Did they show a service not an app?  The inputs to the service need to be from an API, not a UI. And the outputs (or status codes) need to be returned to that API. If they demo with a UI, whether CLI, GUI, or any other way that is not an API, give 0. If the demo does not involve showing an API in operation, give 0. Its ok to load data from files or a database, but they also need to show an API.	This area will be used by the assessor to leave comments related to this criterion.	10 pts

Total Points: 15
