This assignment does not count toward the final grade.

## Final 360-degree Feedback

This is an individual assignment.

You have 100 total points to allocate among the members of your team. Please assign some number of points (possibly 0, possibly even negative) to each member of your team, including yourself, based on what you believe was that student's relative contribution to the team overall. Make sure the total is exactly 100. For example, the scores might be

Jane 25

Paula 25

Georgia 25

Starr 25

Briefly explain each of your score assignments. In this example, its nice to see that things evened out in the end, although we're not quite sure we believe it. What changed? Who did or not do what? What would your team do differently if you had to start over?

You can consider contributions to pair assignments, team assignments, team meetings, anything else relevant to the team, in awarding the points. (Keep in mind, of course, that the other pair in your team were not expected to nor supposed to contribution to your own pair's homeworks, only their own.)

This is also an opportunity (separate from the SEAS course midterm and final evaluations, which you should also submit) to provide feedback about the course. Is there anything that you think should have been covered but wasn't? Is there anything that was covered unnecessarily? Is there anything that should have been presented in a different way? Is there anything else you would change about the course, including contents, teaching methods, delivery, assignments, anything else you think relevant? Briefly explain. Suggestions for next year's offering of this course would be greatly appreciated.

Finally, if you have taken any of 3157, 4111, 4112, 4115, 4118, 4119, 4187 here at Columbia during the past two years (including this semester), please tell me how the approach to testing as taught in this course is different from testing as addressed in any of those courses (if covered at all - if not, please tell me that too). Is there any other Columbia 3k or 4k course that addresses software testing, and if so, what specifically does it cover? Thank you.
