Second Iteration Demo

✎ **Edit**

Demonstrate the first release of your project to your IA mentor. You need to show *both* 1. how your system operates and 2. how your CI works, focusing on your test suite execution and coverage checks.

Please plan (human script) your demo in advance, and debug until it works smoothly. You should be prepared for your IA mentor to "test drive" during the demo. The demo itself only needs to be 10-15 minutes, but schedule to leave time for setup, showing your CI, and discussion with your mentor.

One member of your team should submit a single file (preferably pdf) presenting the following material:

1. The date and time at which you already completed this demo, and briefly describe any challenges that arose before or during the demo.

2. The specific use cases that were demonstrated, highlighting any changes since the **First Iteration Demo**.

3. The specific CI mechanisms that were shown during the demo, including which technology you used.

4. A link to the github repository where your entire codebase resides. Tag the revisions that were shown in the demo.

Your file should also contain your team name and the names/unis of all team members, and may optionally include links to external resources. You may submit repeatedly until the deadline (note that if multiple team members submit, the most recent submission will override all previous submissions by the same or different team members).
