Practice with Github: Homework 1

This is an individual/pair assignment. You can work alone or you can, optionally, work in a pair. If you work in a pair, your pair partner for this assignment does not need to be the same person you will pair with for the team project.

If you already have a github account, you should use that account. If not, create a new account. Use only their "free" plan, do not pay anything.

Work through the first three parts of the "bootcamp" at **https://help.github.com/categories/bootcamp/ (https://help.github.com/categories/bootcamp/)** (set up, create, and fork) so that you can work with github locally using the command line client.

Then pick some non-trivial code that you already wrote yourself (or participated in writing as part of a team) and set that up as a git repository, both on github and cloned on your own machine.

The default is for your github repository to be public. Optionally, you may request access to private repositories by creating a followup discussion to the "requesting private github repositories for this class" note on piazza. If you have some other way to post private repositories on github, or if you prefer to use bitbucket or some other version control host, you will need to make your repositories accessible to the teaching staff.

If you complete everything successfully, all you need to submit is a link to the github repository containing your own code - or, if working in a pair, post the full name and uni of your pair partner and both links (both of you need to submit).

If you ran into any problems, instead briefly explain the difficulties (do not just say "it doesn't work"). You can also ask for help by posting questions in this course's github folder on piazza. Please post **public** questions, not private to the instructors, so you can get help from other students. Piazza allows you to post anonymously if desired.

This assignment will be graded complete/incomplete (pass/fail).

Points   2
