

Assignment T6: Second Iteration Demo

Published

Assign To

Edit

This is a team assignment. See submission instructions at the end.

Demonstrate the final version of your server and your sample client to your Mentor. Your demo can be done via online screen sharing, e.g., on Discord, you do not need to meet in person. All team members should be (virtually) present.

Please plan your demo in advance and debug until it works smoothly. The demo itself only needs to be about 10 minutes, but schedule enough time for pre-demo setup and post-demo discussion with your Mentor.

During the client part of your demo, explain how the client leverages your service's API and show examples from the client's perspective.

In your github repository, [tag \(https://stackoverflow.com/questions/18216991/create-a-tag-in-a-github-repository\)](https://stackoverflow.com/questions/18216991/create-a-tag-in-a-github-repository) the set of file revisions that were shown in the demo.

Arrange some way for your Mentor to be able to "drive", preferably immediately following your demo during the same meeting. Your demo will not be graded until after your Mentor "drove".

Your submission for this assignment should give the date and approximate time at which you already completed this demo and a link to the github repository where your codebase resides. Yes, give us the link again: having the link right there makes github-related assignments much easier to grade. We prefer that your github repository be public, but if private make sure the instructor and all Mentors have collaborator access!

Submission instructions: One member of your team should submit text with the required information. Either type this into courseworks or upload a file.

Points 15

Submitting a text entry box or a file upload

File Types pdf, doc, docx, and txt

Second Iteration
Demo

You've already rated students with this rubric. Any major changes could affect their assessment results.

Criteria	Ratings	Pts
Were all team members present? If a student has a "documented excuse" for not attending, they need to send it to me on edstem for approval.	This area will be used by the assessor to leave comments related to this criterion.	0 pts
Tagged revisions Are the files versions included in this demo tagged on github?	This area will be used by the assessor to leave comments related to this criterion.	1 pts
Did the service part of the demo run smoothly? There should be no crashes, hangs, nonsense outputs, refusals to accept input, etc. Did they explain clearly what they were showing so you could understand?	This area will be used by the assessor to leave comments related to this criterion.	3 pts
Did the client part of the demo run smoothly? There should be no crashes, hangs, nonsense outputs, refusals to accept input, etc. Did they explain clearly what how the client was using the API so you could understand?	This area will be used by the assessor to leave comments related to this criterion.	3 pts
Is their service clearly a service, not an app, and was their client app really using the service's API? The client should not be able to "do" anything with the service not provided by its API entry points. (Its ok for the client to use other facilities, entirely outside the service, but they should not interfere with or replace any aspect of the service).	This area will be used by the assessor to leave comments related to this criterion.	3 pts
Were you able to test drive the service? This does not need to be during the demo meeting, but do not submit a grade for the demo until you were given instructions about what to do to test drive the service and you were able to get it to work. No points specifically for this criterion, but if no test drive of the service, then total score for the entire demo assignment is 0. (It may not be practical for you test drive the client.)	This area will be used by the assessor to leave comments related to this criterion.	0 pts
Feedback How well did the team take into consideration your feedback on the first iteration?	This area will be used by the assessor to leave comments related to this criterion.	5 pts
