Team Assignment 0: Team Formation

Before proceeding please complete the '[Coping with Teams](https://courseworks2.columbia.edu/courses/203184/assignments/1243048) (<https://courseworks2.columbia.edu/courses/203184/assignments/1243048>)' reading as it discusses some crucial elements around team oriented work. You must have a team to complete the course. If you find yourself without a team by the due date then please submit the parts that can be done as an individual.

Students are responsible for arranging their own teams, join our course's Ed discussion: <https://edstem.org/us/join/24t4dk>  (<https://edstem.org/us/join/24t4dk>) and our course's discord: <https://discord.gg/3YxnRJZQFx>  (<https://discord.gg/3YxnRJZQFx>). There are specific categories on these resources to aid in your search for teammates, if either link is broken please inform the instructor immediately. Students may use these resources or any other reasonable means to form teams.

Teams ideally consist of **four** students. The total enrollment may require some teams that are not exactly four students, but everyone should strive to arrange a team of four. Teams with **five** members are OK. Teams with two or three members should merge with other small teams; teams with six or more members should split up.

Please start by copying the [Team Formation Template](https://docs.google.com/document/d/1pSrJEtPRBwdu6SeYUVyDzxsugRfZcQScF09wdiqqDOK/edit?usp=sharing)  (<https://docs.google.com/document/d/1pSrJEtPRBwdu6SeYUVyDzxsugRfZcQScF09wdiqqDOK/edit?usp=sharing>), you will use this to fill in all the necessary information we ask of you below. All students should submit this assignment but members of the same team should submit the same document.

Choosing your Teammates:

State the full names and unis of all team members.

Choosing your Team Name:

Choose a name for your team consisting only of alphanumeric characters. We will use this name as your project group name in Courseworks and Discord.

Choosing your Environment:

All members of the team should use the same programming language - choose C++ or Java - and the same development platform - choose Linux, MacOS or Windows. Make sure all members of your team are fluent in the chosen language as well as have easy access to the chosen platform, this is not the right class to learn a new programming language and the department does not provide any loaner machines.

Setting Up Your Team Repository:

One member of your team should create a shared github repository and invite all the other members as collaborators. Include the link to your team github repository. Ideally your github repository is *public*. If private, you must also invite the instructor and **all** the IAs as collaborators. Our github userids are posted on the [course homepage \(https://courseworks2.columbia.edu/courses/203184\)](https://courseworks2.columbia.edu/courses/203184) on Courseworks.

Submission instructions:

Every student must submit individually but every member of the same team should submit exactly the same thing, so make sure to agree and coordinate. Submit as soon as possible after forming a team; the submission can be modified until the deadline. We will set up group assignment submission after team formation is finalized, so only one team member needs to submit on behalf of the whole team for later team assignments. Upload the filled in template as a PDF to Courseworks before the deadline.

If you prefer to have a copy of this document, you may access a PDF version in the Files > Team Assignments > Specs > T0.pdf
