Team Assignment 3: First Iteration Demo

Demonstrate the first iteration version of your server to your Mentor. Your demo can be done via online screen sharing, e.g., on Discord, you do not need to meet in person. All team members should be (virtually) present.

Please plan your demo in advance and debug until it works smoothly. The demo itself only needs to be about 5 minutes, but schedule enough time for pre-demo setup and post-demo discussion with your Mentor. You will need to deploy your demo ready service to the cloud and perform your demo using that version. Tell your mentor how to access your cloud demo, so they may perform their own tests. You'll need to keep your cloud demo active from the time of your meeting until either your mentor tells you to shut it down or a week passes (whichever is earliest). Include any relevant information about your cloud service (like how to use it etc) in your README.

In your GitHub repository, [tag !\[\]\(003082e50e3009141f59bd5df831749f_img.jpg\) \(https://stackoverflow.com/questions/18216991/create-a-tag-in-a-github-repository\)](https://stackoverflow.com/questions/18216991/create-a-tag-in-a-github-repository) the set of file revisions that were shown in the demo.

Arrange some way for your Mentor to be able to "drive", preferably immediately following your demo during the same meeting. Your demo will not be graded until after your Mentor "drove".

Submission instructions:

Your submission for this assignment should give the date and approximate time at which you already completed this demo and a link to the GitHub repository where your codebase resides. Yes, give us the link again: having the link right there makes github-related assignments much easier to grade. We prefer that your GitHub repository be public, but if private make sure the instructor and all IAs have access! One member of your team should submit text with the required information. Either type this into courseworks or upload a file.

If you prefer to have a copy of this document, you may access a PDF version in the Files > Team Assignments > Specs > T3.pdf
