

Assignment T2: Revised Project Proposal

 Published

 Assign To

 Edit

This is a team assignment. The assignment has five parts. See submission instructions at the end.

Your team will be tentatively assigned a Mentor based on your preliminary proposal. You should meet with your Mentor *before* submitting your revised proposal. "Meeting" can be virtual, e.g., using our class server on Discord, or it can be in-person. Please work out with your Mentor what is most convenient for them.

Part 1:

State the date on which you met with your Mentor. This should be in the past, not the future.

Part 2:

Reconsider your answer to the part 2 questions in the preliminary proposal and change anything that needs to be changed, otherwise you can copy/paste it here.

Part 3:

Reconsider your answer to the part 3 questions in the preliminary proposal and change anything that needs to be changed, otherwise you can copy/paste it here.

Part 4:

Reconsider your answer to the part 4 questions in the preliminary proposal and change anything that needs to be changed, otherwise you can copy/paste it here.

Part 5

List the software engineering tools you think you will use for developing your service; make sure they are compatible with your programming language and development platform. Include (at least) persistent datastore, build or package manager, continuous integration tool (we recommend [github workflows](https://docs.github.com/en/actions/automating-builds-and-tests/about-continuous-integration) , [test runner for unit testing](https://docs.github.com/en/actions/automating-builds-and-tests/about-continuous-integration), test runner for API testing (may or may not be the same as the unit testing tool), test coverage tracker (might or might not be built into test runner), style checker, static analysis bug finder (may or may not be the same as the style checking tool). Ideally, your team would choose an IDE or framework that builds in and/or plugs in some or all of these.

Submission instructions: One member of your team should submit a single file (preferably pdf) presenting your revised proposal. Your file must contain your team name and the names/unis of all team

members. You may submit repeatedly until the deadline. Note that if multiple team members submit, the most recent submission will override all previous submissions by the same or different team members.

Points 20

Submitting a file upload

File Types pdf, doc, docx, and txt

T2 Revised Proposal

You've already rated students with this rubric. Any major changes could affect their assessment results.

Criteria	Ratings	Pts
part 1: IA mentor meeting - 5 points max Don't grade revised proposal at all until after meeting occurs. up to 5 points - Does the revision take your advice (if any) into consideration? Give full credit if you did not make any suggestions.	This area will be used by the assessor to leave comments related to this criterion.	5 pts
part 2: Elaborated Service Overview - 3 points max 1 point - Do they describe meaningful and necessary data that persists across service executions? 1 point - Do they discuss the functionality of the service and does it indeed sound like a stand-alone service, not an app back end? 1 point - Do they explain how the service distinguishes multiple client instances for the same application from each other (1/2 point) *and* how the service distinguishes multiple unrelated clients for different applications from clients corresponding to other applications (1/2 point)?	This area will be used by the assessor to leave comments related to this criterion.	3 pts
part 3: Elaborated Clients - 6 points max They need to describe two (2) or more distinct unrelated clients. If any of the clients are essentially different roles for what could be the same app, e.g., donors vs. recipients, doctors vs. patients, give 0 total for part 3. If all the clients are clearly unrelated applications, then give 1 point each for two of those clients (don't give extra points for more than two). Plus for each of these two clients, an additional 1 point - Do they discuss what the client's functionality would "do" for its own clients or users (clients can themselves be services with their own clients) and another additional 1 point - Do they discuss what the client "needs" the service to do to implement the client's own functionality? (This should add up to max 3 points for each of two clients, so 6 points altogether.)	This area will be used by the assessor to leave comments related to this criterion.	6 pts

Criteria	Ratings	Pts
part 4: Elaborated Testing - 3 points max 1 point - Do they include tests for whether the persistent data indeed persists across executions? 1 point - Do they discuss API testing where the set of tests is constructed to look like multiple distinct client instances are using the service, not just the same one over and over (but there shouldn't be any actual clients yet)? 1 point - Do they describe unit testing for the internal code units that implement the service?	This area will be used by the assessor to leave comments related to this criterion.	3 pts
part 5: Tools - 3 points max 1 point each. Does they include (at least): a tool for running unit tests, a tool for running API tests (the two testing tools can be the same if that tool indeed does both), and a style checker?	This area will be used by the assessor to leave comments related to this criterion.	3 pts
Total Points: 20
